

Guide to Sealing

Sealing Prestige Stone is not required. However, applying a quality water based penetrating siloxane sealer can provide added protection and make the surface easier to clean if it becomes dirty.

A breathable penetrating masonry sealer helps protect against moisture and staining while allowing moisture vapor to escape. Because it penetrates below the surface, it will not change the natural color or appearance of your stone.

BENEFITS OF SEALING

ADDED PROTECTION AGAINST MOISTURE

Helps reduce water absorption and protects against moisture intrusion.

HELPS RESIST STAINING AND DIRT BUILDUP

Provides a barrier that helps prevent stains and keeps your stone looking its best.

MAKES CLEANING AND MAINTENANCE EASIER

Dirt and debris are less likely to adhere, making routine cleaning simpler.

BREATHABLE FORMULA

Allows moisture vapor to escape so the stone can breathe naturally.

WILL NOT ALTER THE NATURAL LOOK OF THE STONE

Penetrates below the surface without changing the color or finish.

BEST PRACTICE

For best results, allow the stone and mortar to fully cure before applying any sealer.
